Sine law worksheet pdf

Showing the first 8 worksheets found for - Sinus. Some of the worksheets for this concept are Find any measure around your answers, Law of sines practice, Law of sines, Missing Parties 1, Extra Practice, Sin Law and Cosine Work Answers, Solve Triangles t1s1, The Law of Sin Work Work Answers. Has a worksheet you are looking for been found? To download/print, click the pop-up icon or print icon in a worksheet to print or download it. A worksheet will open in a new window. You can iter or print it using the document reader options in your browser. (1) Determine whether the following measurements give one triangle, two triangles or without a triangle: $\angle B = 88^\circ$, $a = 23$, $b = 2$. Solve if a solution exists. Solution (2) If the sides of triangle ABC are $a = 4$, $b = 6$ and $c = 8$, then it is shown that $4 \cos B + 3 \cos C = 2$. Solution (3) In triangle ABC, if $a = \sqrt{3} - 1$, $b = \sqrt{3} + 1$ and $C = 60^\circ$, find the other side and other two angles Solution (4) In any triangle, prove that $\triangle = b^2 + c^2 - a^2/4 \cot A$. Solution (5) In triangle ABC, if $a = 12$ cm, $b = 8$ cm and $C = 30^\circ$ indicates that its area is 24 sq.cm. Solution (6) In triangle ABC, if $a = 18$ cm, $b = 24$ cm and $c = 30$ cm, then indicates that its area is 216 sq.cm. Decision (7) Two soldiers A and B in two different underground bunkers on a straight road target an intruder at the top of the hill. The angle of elevation of the intruder from A and B to the ground level in the eastern direction is 30° and 45° respectively. If A and B stand at a distance of 5 km, find the offender's distance from B. Solution (8) A researcher wants to determine the width of a pond from east to west, which cannot be done by real measurement. From point P, it finds the distance to the easternmost point of the lake to be 8 km, while the distance to the westernmost point of P to be 6 km. If the angle between the two lines of vision is 60° , find the width of the lake. Decision (9) Two naval helicopters A and B fly over the Bay of Bengal at the same altitude from sea level to search for a missing boat. The pilots of the two helicopters can see the boat at the same time as they are separated 10 km apart. If the distance of the boat from A is 6 km and if the section AB is 60° on the boat, the distance of the boat from B. Solution (10) A straight tunnel must be made through the mountain. The survey observes the two ends of tunnel A and B, which will be built from point P in front of the mountain. If $AP = 3$ km, $BP = 5$ km and $\angle APB$
